# STEEL TRIP EDGE

**BOX PLOW**

**WITH TRIP LOCK**

**Steel Trip Edge Box Plows With Trip Lock.** Hard-packed or icy snow always presents a challenge. You may find in these conditions that you have to go back over some areas and scrape them with the bucket edge. However, the Avalanche® Steel Trip Edge eliminates this problem by clearing right down to the pavement on the first pass. It can reduce your total plowing time by several hours. When the pressure is on, that makes all the difference.

You Never Regret Buying Quality

# Clear Right To The Pavement – First Time

The patented\* Avalanche® Steel Trip Edge offers a unique plowing solution. Unlike trip systems based on a rubber blade, the Avalanche uses laterally-mounted torsion springs that give exceptional stiffness for cutting through hard-packed snow and ice. This not only gives you more attack in tough conditions but also provides great durability for a long service life.

The Avalanche also comes with the Trip-Lock option. This allows the operator to lock the edge solid when

plowing on gravel or scraping stubborn ice; simply removing the lock restores normal trip action. In addition, the pre-load key design means springs can be serviced quickly and safely, without the use of power tools.

This is the toughest, most versatile, and most innovative trip edge system on the market – exactly what you would expect from Avalanche.

\* U.S. Patent 7555853

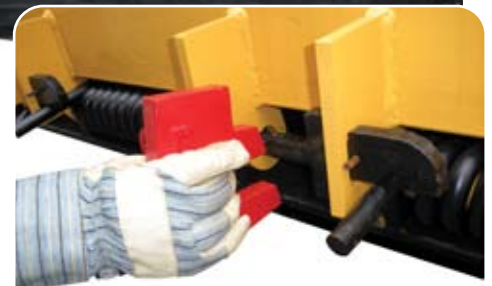

## Key Benefits:

- Exceptional stiffness for cutting through hard-packed snow
- Rugged, torsion spring construction
- Rides back fully over obstacles
- Trip-lock allows operator to lock edge solid

Avalanche® box plows are constructed from extra strong 44W grade steel and feature solid steel plate receivers and double side bracing\*.

Avalanche®, the only box plow built tough enough to take the knocks and keep on going.

\*LDA/LDAT and BHA/BHAT models
